#System Architecture

The system works in the following steps:

1)User uploads resume

2)Resume text extraction

3)Skill detection

4)Field prediction

5)Resume scoring

6)Course recommendation

7)Display results

#Technologies Used

Frontend

- Streamlit

Backend

- Streamlit

Programming Language

- Python

Database

- MySQL

Libraries Used

- Streamlit
- Pandas
- NumPy
- PyMuPDF
- pdfplumber
- EasyOCR
- Plotly
- PyMySQL
- PDF2Image
- Pillow

#Disadvantage of Current System (Manual Resume Screening)

Time Consuming.

It is challenging task to handle resume manually.

Requires individual review of each resume from hiring managers

The same amount of time and effort is often expelled for candidates who are qualified as the ones who are

#Applications

- Recruitment Companies
- Job Portals
- College Placement Cells
- Resume Evaluation Systems
- HR Departments

 # Future Enhancements

- Add Machine Learning model
- Add multi-language support
- Add LinkedIn integration
- Add Resume Builder
- Add Job Recommendation System

#Limitations of Proposed Tool

May not give you accurate result because of different resume formats.

#Conclusion

The **AI Resume Analyzer** is an intelligent system that automates resume analysis. It helps candidates improve their resumes and assists recruiters in identifying suitable candidates. This system reduces manual effort, improves efficiency, and enhances recruitment processes.
